I-CURE LED

UV Offset series for paper for Low Energy Consumption UV Dryers Paper and boards substrates – secondary packaging

Performances

Good dot sharpness

Substrates

Non coated

Matt coated

cardboards Thermal Eco paper

Tracing paper

Ink profile

Adhesion

Rub and

scratch

Resistance

Gloss coated

Chrome coated

Thermal coated paper

Metalized substrates

Synthetic substrates (1)

> High quality prints

- High reactivity, fast curing speed
- Formulated to match with high wavelength UV, specific characteristic of low energy sysems (H-UV, HR UV, LE UV and also LED UV)

Suitable for hot stamping and lamination after test⁽²⁾

**

**

Drying

*** Perfectly suitable

* Test necessary

(1) Synthetics (PE, PP, PET, PVC)

Packing

1 kg (series) and 2,5 kg (process) UV containers

Recommendations

Hot Stamping

- Do not use for primary foodstuff packaging without functional barrier
- Check the compatibility of the ink/substrate/packaged foodstuff
- Only use UV auxiliary products (anti tack paste, cleaners, thinners...)
- In case of laser overprinting, it is recommended to print 50% half tones rather than solid print areas.
- ⁽²⁾Suitable for hot stamping and thermal overprinting (test before production).
- May be laminated or varnished (UV, nitro, acrylic).
- To improve rub resistance, use in-line or out-line UV varnish. We recommend ink duct varnishes **Pulsar 200 Glossy LE** and **Pulsar 200 Matt LE** for HUV, LE UV, LED UV... curing device
- Use mainly EPDM UV rollers
- Store 24 month in original unopened container between 5 and 30°C and protected from direct sun lights. After this period, ink can be used after check

Chemical products could be harmful. Consult MSDS and respect usage guidelines
